WELCOME TO THE FOLD. WITH A TWIST.

Introducing the 9mm SUB2000™ GEN3. The most significant new twist? Literally, the single twist-and-fold motion of the patent-pending rotating forend. Release the barrel assembly with a lever, twist the forend in either direction, and snap it into place.

Other GEN3 updates include many “quality of life” improvements such as an aluminum trigger, lightened trigger pull, and an ambidextrous bolt hold-open. Plus, it has a redesigned operating handle with a new easy-pullback action, and yes, it still takes Glock mags.

1999 The SUB-9, KelTec's first fold-in-half pistol-caliber carbine, is born. With parts made of aircraft grade aluminum, it was revered for sharing popular handgun mags and compact storage.

2002 The SUB2000 era begins. True to the design of its SUB 9 father, but made with durable, high strength polymer, this pistol-caliber, fold-in-half carbine was lighter, easier to handle, and more affordable.

2015 The GEN2 of the SUB2000 introduced a new look to this compact folder. With an increased variety of magazines, intuitive sights, adjustable stock and improved M-LOK® hand-guard, it's ideal for backpacking trips and space-challenged situations.

2023 The dawn of the SUB GEN3. With a single twist and fold motion to either direction, the redesigned forend rotates top mounted attachments to the side for folding. Plus many other “quality of life” improvements such as an improved aluminum trigger, and ambidextrous bolt hold-open to further perfect this generational carbine.
